Personal Portfolio: bobieansah.com

PROFESSIONAL SUMMARY

A Cloud and DevOps Engineer skilled in AWS, Azure, Kubernetes, and Terraform, with expertise in automation, CI/CD, and scalable cloud infrastructure. Certified in AWS, CKA, and Terraform, focused on efficient, secure deployments and Infrastructure as Code (IaC). Combines cloud engineering with full-stack web development for end-to-end solutions.

EDUCATION

Ohio University (USA), MSc. Information And Telecommunication Systems 12/2021

Relevant Courses: Internet Engineering, Information Networks, Python Scripting, Telecommunication, IT compliance

Computer Applications Development, Conestoga College 05/2025

Relevant Courses: JavaScript, C# programming, .NET MVC core, Software Quality, Web Foundations, Database Management (SQL)

IT CERTIFICATIONS

- AWS Certified Developer Associate
 - Certified Kubernetes Administrator (CKA)
 - AWS Solutions Architect Associate (1x)
 - Terraform Associate (1x)
 - VMware Certified Professional Application Modernization 2023
-

SKILLS

- | | | | | |
|--------------|------------------|-----------|-------------------|-------------|
| • Terraform | • Kubernetes | • Docker | • Web Development | • Linux |
| • JavaScript | • C# programming | • Jenkins | • .NET MVC core | • SQL |
| • PowerShell | • Python | • CI/CD | • React Native | • Azure ADO |
-

WORK EXPERIENCE

Advizex Technologies

Cloud & Automation Consulting

(OHIO-USA)

11/2022 – 07/2024

- Conducted a comprehensive analysis of customer's VMware infrastructure to assess compatibility with AWS cloud services.
- Executed infrastructure migration to AWS cloud utilizing AWS MGN while minimizing downtime.
- Configured, maintained, and optimized several AWS technologies, including EC2, S3, FSx, VPC, and Route53, ensuring high availability and performance in the client's environment.
- Implemented and managed AWS Load Balancers and CloudFront distributions to ensure high availability, improve application performance, and enhance security for web services.
- Deployed and managed AWS cloud infrastructure with cloud formation templates to achieve uniformity, consistency and improve security in client's environment.
- Managed system performance with CloudWatch by creating dashboards, setting alarms, and analyzing logs for application reliability and resource optimization.

- Conducted extensive testing post-migration to validate the functionality and performance of the AWS environment.
- Collaborated with customer engineering teams to conduct extensive post-migration testing to validate the functionality and performance of the AWS environment.
- Monitored and optimized application performance, ensuring scalability through auto-scaling as user demands grow.
- Provisioned and managed Azure services such as virtual machines, storage accounts, virtual networks, and applications in the client's enterprise account.
- Built and configured a hardened Ubuntu Linux server as a repository for on-premises backups, ensuring robust security and reliability.

Progressive Insurance

(OHIO-USA)

IT Systems Engineer, DevOps Associate

04/2022 - 10/2022

- Provided cloud support on a variety of AWS cloud issues and document resolution processes with Remedy ticketing system.
- Supported application release, including reviewing terraform codes in staging area to ensure policy conformity and readiness for production before release to the client's cloud account.
- Utilized Infrastructure as Code (IaC) tool, Terraform, to deploy AWS resource in accordance with best practice.
- Setup and managed applications utilizing CI/CD pipelines (GitHub, Azure DevOps) to maintain terraform codes and deployments.
- Collaborated with development and operations teams to streamline deployment processes, resolve issues, and enhance overall system performance.
- Opened support ticket with vendor (AWS) to resolve customer needs after exhausting internal escalation processes.
- Configured Kubernetes manifests to optimize application performance and maintained Kubernetes clusters in a testing environment.

Cleveland Clinic IT Department

(OHIO-USA)

IT Support Engineer

01/2022 – 04/2022

- Identify root cause of operational systems failures and work to resolve them within timeline
- Perform asset management of devices on company's network, including maintaining component inventory, device installation, configuration and upgrades
- Remotely deploy applications to client's devices and perform systems administration through Active Directory
- Configure network and server components to meet functional specifications
- Extensively support critical Windows and MacOS operating systems and software within the enterprise
- Use IT ticketing system (ServiceNow) to accurately record, update, and document work processes
- Work with vendors to facilitate technical support escalation and ticket resolution
- Troubleshoot MacOS, laptops, systems and hardware equipment assigned to employees and clinic facilities
- Participate in IT Project planning and executions to improve and upgrade Company's technologies
